

Fleet Tracking Systems - TrackerXL

Tracker XL solutions offer a straightforward way of tracking vehicles, whether monitoring trucks, equipment, or a fleet of cars. Tracker XL works across the world using the Iridium satellite system. Iridium is the largest fully meshed satellite network in the world, and the only satellite voice and data system with complete global coverage.

Our satellite tracking solution is tailor-made to your requirements, enabling you to:

- acquire accurate positioning on a digital map,
- receive regular status notifications via SMS or email,
- provide your customers with accurate ETAs,
- integrate data directly into your own database,
- monitor and prevent excessive fuel consumption, and
- apply geofencing - receive instant notification when no-go zones have been entered, or automatically immobilize the vehicle if necessary.

Our vehicle tracking system provides huge savings by enhancing fleet efficiency and perfecting your asset utilization for maximum returns.

Key Benefits

Monitor the status of your vehicles, personnel and goods, where ever they go, which increases staff security and possibility of recovery of vehicles in case of theft

Real Time data transmission from mobile assets with 100% world wide coverage, which means that you can monitor all vehicles simultaneously no matter the location

On Line transmission of information from vehicle position to specific vehicle and cargo data. The reporting package is an important tool in reducing fuel and running costs of your fleet. At the same time you can monitor driver performance, which can be used for training of drivers to reduce risk of accidents

More than 15 years of experience in telematics and logistics

OEM telematic systems supplier to Europe's main truck manufacturers:

- MAN
- DAF /Leyland
- VOLVO
- RENAULT

Telematics and Logistics supplier to Armed Forces:

- German Army
- British Army
- Netherlands Army
